

New ram worming protocol

- On arrival, administer Zolvix orally at 1ml / 10kgs
- Yard / house for 24-48 hours so any resistant worms are passed in the faeces
- Compost or burn contaminated bedding. **DO NOT SPREAD ON PASTURE.**
- Put ram onto 'contaminated' pasture (recently grazed field)
- Quarantine ram from flock for 28 days

For further information on appropriate quarantine protocol on scab, infectious lameness and resistant fluke, please contact a member of the sheep team
